RESIDENTIAL AFTER-CARE INSTRUCTIONS

HERE ARE SOME RECOMMENDATIONS FOR CARE AND MAINTENANCE OF YOUR NEWLY RESTORED NATURAL STONE AREAS:

DO's

- Do use P24 Stone Soap neutral cleaner or dilute Ivory or Lux dishwashing liquid. Always rinse well, squeegee dry, and/or buff dry.
- Do clean natural stone with unbleached cotton cloths, a clean oil-free mop, or a clean white buffing pad.
- Do sweep frequently to keep all residue off of stone surfaces. This prevents unnecessary scratches and etches. Use a soft oil-free dust mop.
- Do read the labels on your household cleaners. Don't use any cleaners that contain acids, ammonia, vinegar, lemon or citrus acids, bleach, oils, or heavy alkalines.
- Do seal your floor or other natural stone surfaces periodically with a penetrating seal for natural stone. Sealants are not complete protections; immediately blot up spills, and keep acids and heavy alkaline off of stone surfaces.
- Do allow 72 hours for stone seals to fully cure in food preparation areas. Food may be safely placed directly on the stone surface after full cure time.
- Do protect your floor surfaces with non-slip mats and countertops with trivets, coasters, and placemats.

DON'TS

- Don't use waxes or topcoat sealants.
- Don't use flax soap or oil soap; these cleaners can create a film which is very difficult to remove.
- Don't use abrasive cleaners and don't scrub hard.

TO OUR CUSTOMERS: YOUR STORIES AND EXPERIENCE OF OUR WORK IS VALUABLE TO US!

IF YOU LIKED OUR WORK AND BUSINESS PROCESS, WE APPRECIATE YOUR TIME AND INVITE YOU TO PLEASE VISIT YOUR FAVORITE BUSINESS REVIEW SITE AND EXPRESS YOUR SATISFACTION WITH OUR WORK.
